

Why the only argument against nuclear energy is no longer valid

- What the media hasn't told you about Chernobyl, Three Mile Island... and the survivors of Hiroshima.
- What we could do with the radioactive "waste" that we now try to get rid of (when we're not trying to produce it at high cost).
- Why aren't the activists going after Mother Nature? We're being pummeled constantly by all manner of radiation that humans did nothing to create.
- Which is most dangerous: a reactor leak, a pint of salad oil, or a handful of dirt?
- How did X-rays help Prof. Shrader's Guinea pigs survive the diphtheria bacillus?
- Why it's impossible to steal nuclear fuel from a functioning reactor.

ISBN: 0930073355
Nov. 2005, paperback
247 pages

Read this explosive, controversial new book to find out how a rational assessment of radiation risks and benefits could offer increased health and vitality, as well as an avenue to nearly-limitless energy for the future!
